And please share your thoughts with a review on Amazon.

## INSTALLATION INSTRUCTIONS

STEP 1: **Choose your formation.**

- One Full Wraparound Planter
- Two front-facing Half-Wraps (with optional end caps)

STEP 2: **Measure the height you want to install your planter and mark the post.** Keep in mind the height of the plants you'll be using—an ideal ratio is 2/3 foliage to 1/3 planter.

STEP 3: **Connect two Corner Pieces together by feeding the top and bottom interlocking channels together.** For Large planters, place an Extender between the two corner pieces.

STEP 4: **Fit the first half snugly around the front of your post at the level marked.** Insert a screw in the first semicircular tab and drill it in loosely. Repeat on the next tab, leaving the screw loose.

STEP 5: **For Full Wraparound Planter:** Connect the remaining two pieces together and feed them into the interlocking channels of the mounted half. Screw in place and tighten all screws.

**For Half-Wrap:** Insert the end caps into the open ends of the planter. Screw in place and tighten all screws.

**For Large Wraparound Planter:** Insert Extenders on each side of the mounted half. Screw in loosely. Connect remaining two Planter pieces with the remaining Extender in between. Feed the second half into the channels of the Extenders. Screw in place loosely. Tighten all screws.

STEP 6: **Line the bottom of planter with a mesh fabric or coffee filters to prevent potting mix from draining through.** Fill with potting mix and your choice of plants. Stand back and admire your handiwork.

To really make the EP3 your own, consider spray painting to complement your home's colors and replant as the seasons change to keep it looking fresh.
